

Fog Bandit 240 DB Downward Nozzle

The FOG BANDIT 240 DB Downward Nozzle is a versatile, compact, reliable and efficient unit which offers exceptional fog generating capabilities. This version is used where downward firing of the fog is required such as in warehouses or particularly high-ceiling rooms. One unit can protect rooms up to 504 cubic metres. For larger volumes, 2 or more FOG BANDIT's may be used in unison.

Features

- Produces 28 cubic metres of fog per second with visibility range (density) reduced to just 30cm
- 24/7 self-diagnostics instantly reports stats changes to the alarm panel
- Error LED provides quick and easy identification of the failure for rapid resolution.
- Used where downward firing of the FOG BANDIT is required.

Applications

Ideal for high-ceiling buildings where projecting fog downwards provides a wider curtain increasing perimeter protection and deterrent effect.

Specifications

Dimensions: 270mm(w) x 365mm(h) x 255mm(d)
